

How does sustainable transport help the environment?

Sustainable transport means travelling to different places you want to go in a way that is better for the environment and our health.

When we use electric buses, there is less pollution that makes the air dirty with smoke or harmful gases. This keeps the air clean and fresh for you, Tinyfoot and everyone to breathe.

Using less petrol or diesel and more electricity to power our buses helps reduce pollution and save energy.

When we travel in ways that are kinder to the environment, like walking or taking the bus, we help keep our earth happy and healthy, with more trees and animals enjoying their homes.

So, by choosing sustainable transport, we're helping to protect our planet for the future!
